

I strongly support the Comment submitted by The American Radio Relay League concerning Docket ET 03-104. The comments made by proponents of Broadband over Power Line (BPL) seem to have little credible scientific data to support approval of this docket at this time. Without further research, this BPL technology may cause harmful interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. I believe approval of the BPL docket would not be in the best interests of the public and urge that it be rejected at this time.
